Evening Brief

Date: Sunday August 6, 2017

Weather Summary

***** Critical dry lightning over NE Nevada/NW Utah and much of Idaho Monday*****

Lightning will push northeastward into northeast NV, western UT and much of Idaho/western Wyoming on Monday. This is of particular concern as these areas have seen unusually hot and dry weather over the past week. Although these storms will be a mix of wet and dry, any drier strikes will be a concern for fire starts, with increased spread by strong outflow winds. A **High Risk** has been issued for lightning northeast NV/western Utah and Idaho on Monday. Showers and thunderstorms will continue over much of the region on Tuesday.

Drier air will begin to spread into the southern Great Basin by midweek with continued showers and thunderstorms possible across the northern 2/3 of the region.

Preparedness Levels

Great Basin	3
National	4

Great Basin Fire Activity (from Irwin): Light Activity

New Fires and Acres: 18 fires for 3,117.7 acres; 65,787 acres large fire growth; 1 new large fire

Resources:

- Crews: 14 T1 IHCs in GB: 13 committed, 1 R&R.
- GBCC has committed an estimated 94+ Type 3, 4, 6 engines.
- 2-T1 and 7-T2 helicopters are available in GACC.

Great Basin Fire Potential Summary

Near record fire danger indices for the time of year are being observed over the mountains of western Idaho with very high indices elsewhere across Idaho into northern Nevada. Values are much lower across the south and east. As lightning activity increases across the northern half of the region into early next week new IA and the potential for new large fires will increase.

Fire danger will likely decrease over much of the region as storms begin to produce precipitation and relative humidity increases early next week.

We have issued a Great Basin **Fuels and Fire Behavior Advisory for Nevada, Idaho and Utah**, available at the following link:

https://www.predictiveservices.nifc.gov/fuels_fire-danger/GB_Fuels_and_Fire_Behavior_Advisory.pdf
